Late Ninevite 5 Pottery from a Residential Quarter at Tell Arbid

The excavations at Tell Arbid (modern-day Arbil) revealed a rich assemblage of pottery from the Late Ninevite 5 period. The ceramic repertoire includes a variety of vessels such as bowls, jars, and mixing bowls, which were used in daily domestic activities. The pottery is characterized by its high-quality craftsmanship and decoration. The finds were studied in detail, focusing on typology and function, offering insights into the lifestyle and economy of the inhabitants.

**Reference:**

The detailed analysis and collection of the pottery is published in the *Journal of Near Eastern Studies*.

**Materials:**

- Clay and sand were mixed to form the pottery body.
- Decorative techniques included incising and slip-painting.

**Function:**

- Bowls were used for serving food and beverages.
- Jars were likely used for storage.

**Techniques:**

- Hand-built techniques were employed for shaping the vessels.
- Slip-painting was used to enhance the aesthetic appeal.

**Conclusions:**

- The pottery reflects the cultural and economic activities of the Late Ninevite 5 period.
- The presence of certain types of vessels suggests trade and exchange with other regions.
